Company description

Sentec is a Swiss-American medical device company specializing in respiratory care. Since our founding in 1999, we utilize a deep-tech approach that is founded on advanced science and avant-garde technologies for respiratory patients across care areas. The goal is to support enduring change in clinical practice that reduces challenges of respiratory patients, improves healthcare outcomes, and alleviates cost.

Sentec applies latest scientific results and engineering technologies across the three core platforms transcutaneous monitoring, intrapulmonary percussive ventilation and electrical impedance tomography. We research, develop and manufacture all products exclusively in-house.

Sentec believes in flat hierarchies, in a truly interdisciplinary working community, in which employees can contribute ideas, speak up and decide themselves.
